Your Comments: The proposed plan does not go far enough to take care of the pollution problem in the Portland Harbor. I am especially concerned about what would happen in the event of an earthquake if most of the contaminants are allowed to remain in place instead of being removed. Most or all of the contaminated soil in the river should be removed to avoid a catastrophic effect on the river should there be an earthquake. Also the clean-up should be effective enough to enable people to catch fish in the river and be able to safely eat them. The companies that caused the pollution in the first place should be the ones to shoulder the cost of solving the clean-up.
